FREE SETUP GUIDE · @AIBURNER_OFFICIAL

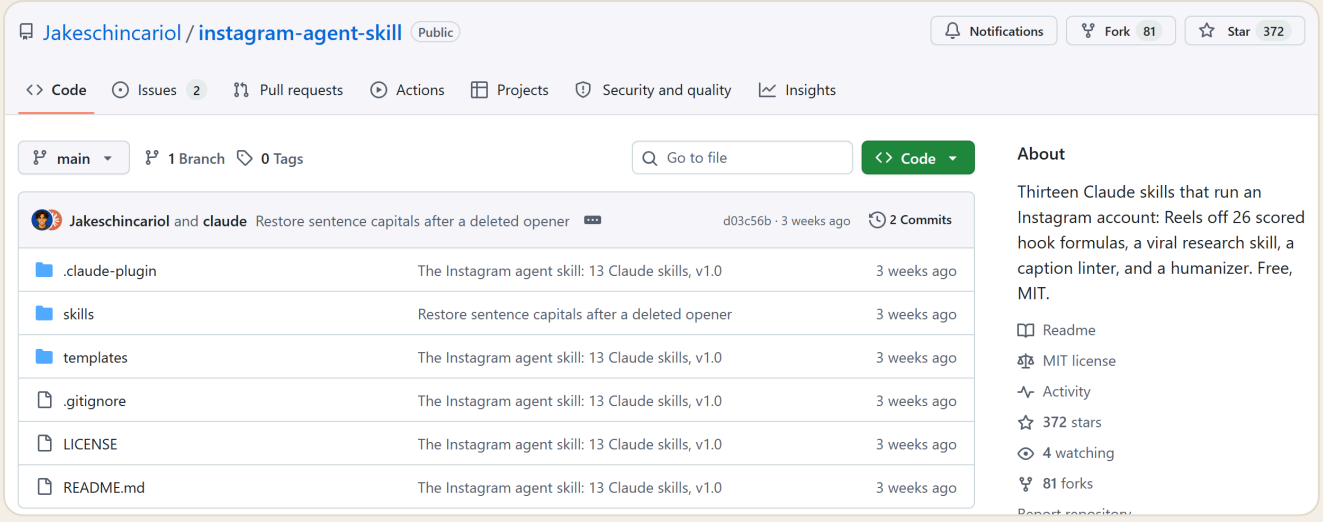

Turn Claude into your *Instagram manager*

The **Instagram Agent Skill** is a free, open-source pack of **13 Claude skills** that does the work behind an Instagram account. It writes Reels from 26 proven hook formulas, comments on other people's posts, plans your week, and finds the best-performing reels in your niche and turns them into scripts for you.

13
skills in one pack

26
scored hook formulas for Reels

You commented “Instagram”, so here's the full setup guide. Takes about 10 minutes.

PART 1

01 Install it

Pick **one** of the three ways below. Option A is the easiest. You need **Claude Code** (terminal, desktop app or the VS Code extension). The helper scripts also need **Python 3** installed.

A

Paste the link into Claude EASIEST

Open Claude Code and paste exactly this:

```
https://github.com/Jakeschincariol/instagram-agent-skill

Install this skill, then confirm /ig-reel works.
```

Claude clones the repo, copies the 13 skills into place, and tests one for you. When it says `/ig-reel` works, you're done.

B

Do it yourself in the terminal MANUAL

```
git clone https://github.com/Jakeschincariol/instagram-agent-skill.git
cp -r instagram-agent-skill/skills/ig-* ~/.claude/skills/
```

On Windows, run this in Git Bash. If you want the skills in one project only, copy the folders into that project's `.claude/skills/` instead.

C

Install it as a plugin PLUGIN

Inside Claude Code, run these two commands one after the other:

```
/plugin marketplace add Jakeschincariol/instagram-agent-skill
/plugin install instagram-agent
```

> **No Claude Code?** Open any `SKILL.md` from the repo's `skills/` folder, paste it at the top of a normal Claude chat, and it works as a mode. You lose the Python tools (the hook scorer and the humanizer), but everything else works.

PART 2

02 Teach it your voice (10 min, don't skip)

Every skill reads one file to sound like you. Spend ten minutes on it. It matters a lot on Instagram because you have to say the script out loud.

1. Copy `templates/voice.md` from the repo to `~/.claude/instagram/voice.md`.

2. Fill it in yourself, **or** send Claude three of your own reels/scripts and say: *"write my voice.md from these"*.

03 Your first week with it

1. **Find what's working:** `/ig-viral`

   It finds the reels that are actually working in your niche, ranks them by how far each one beat its own account's normal views, names the hook formula, and builds a swipe file.

2. **Plan the week:** `/ig-plan`

   What to post, which format, when to post it, and the 10 accounts to engage with.

3. **Write the reel:** `/ig-reel`

   Give it one idea. You get three hooks from the 26 formulas, each scored, then the script, the on-screen text and a timed beat sheet.

4. **Caption + clean-up:** `/ig-caption` → `/ig-human`

   The caption is checked against the ~125 characters the feed shows before "... more". The humanizer then strips the AI tells (em dashes, stock phrases, invisible characters).

5. **Engage:** `/ig-comment` and `/ig-reply`

   It writes real comments for other people's posts and replies for the thread under yours, never just "fire fire fire".

> **Important:** these skills **write**, you **post**. Nothing goes live until you copy it and post it yourself. That's deliberate, because auto-posting bots break Instagram's Terms and get accounts blocked.

REFERENCE

04 All 13 skills

`/ig-reel`	One idea into a Reel: 3 scored hooks from 26 formulas, script, on-screen text, timed beat sheet.
`/ig-viral`	The **Virality skill**. Finds what's working in your niche, ranks it by outlier multiple, names the formula and writes the swipe file.
`/ig-caption`	Linted caption. Shows the exact text the feed shows before the tap. Enforces the 5-hashtag cap.
`/ig-carousel`	Swipe posts: a cover that earns the swipe, slide copy, 1080×1350 files.
`/ig-story`	The daily story sequence, which sticker does which job, and the DM funnel.
`/ig-profile`	Scores your profile out of 100 on a 12-part rubric, then rewrites the weakest parts first.
`/ig-plan`	The week: what, which format, when, and 10 accounts to engage with.
`/ig-human`	The humanizer. Cleans the draft, then scores it on five checks before you see it.
`/ig-comment`	Comments on other people's posts. Nine types, picked by what the post actually is.
`/ig-reply`	Replies under your own post, sorted into keyword / lead / question / support / noise.
`/ig-dm`	The keyword delivery message, first DM, collab pitch and two follow-ups.
`/ig-repurpose`	One video, podcast or newsletter into a week of standalone reels and carousels.
`/ig-audit`	A post-mortem on what you already posted, ranked by outlier multiple and shares per reach.

Good to know

- The hook scorer is great at **killing weak hooks**. It can't guarantee a viral one. Your face, edit and audio still decide that.
- `/ig-viral` reads at human speed in your own browser. It never asks for your password.
- If a draft needs a number you haven't given, it leaves `{{your number}}`. It doesn't invent stats.

Stuck?

- Type `/ig-reel` in Claude Code. If it isn't recognised, the install didn't land, so re-run Option A.
- Python errors? Install Python 3 and try again.
- Questions? DM me on Instagram: **@aiburner_official**.
